

November is Diabetes Awareness Month

- Nearly 30 million children and adults in the United States have diabetes.
- Another 86 million Americans have prediabetes and are at risk for developing type 2 diabetes.
- The American Diabetes Association estimates that the total national cost of diagnosed diabetes in the United States is \$245 billion.
- Type 2 diabetes is more common in African Americans, Latinos, Native Americans, and Asian Americans/Pacific Islanders.
- Diabetes disproportionately affects older adults. Approximately 25% of Americans over the age of 60 years have diabetes, and aging of the U.S. population is widely acknowledged as one of the drivers of the diabetes epidemic.
